INDEX.

Adie, Alexander, Esq. his register of the barometer, thermometer, and rain-gauge, kept at Edinburgh, 358.
Africa, expedition into Central, 348.
Agassiz, Professor, his new classification of fishes, and on the geological distribution of fossil fishes, 176
Aide-Mémoire du Voyageur, par Jac. R. Jackson, noticed, 380.
Allanite of Greenland, 366.
America, Travels in South, 296.
——— Birds of, 131.
——— North, critical notices of the various organic remains hitherto discovered in, 28,
Ampere, his theory of the formation of the globe, and of volcanoes, 339.
Anatomy, Comparative, Dr Grant's Outlines of, noticed, 380.
Animals, on the different, and vegetables represented upon the mosaic on the pavement of the Temple of Fortune, 59.
Antimonial nickel, 367.
Antimony, on the chemical composition of the crystallized oxychloride of, 41.
Arago, M. on springs, artesian wells, and spouting fountains, 206.
Arnott, G. A. Walker-, his Prodromus Floræ Peninsulæ Indiæ Orientalis, 178.
Arts, Society of, proceedings of the, 203, 401.
—— Useful, series of reports on the progress of the, 167.
Atherton, Charles, civil-engineer, his description of drawing of machinery for registering the variations of the tide and wind, 311.
Audubon, his Birds of America and Ornithological Biography, 131.

Barry, Dr, his ascent to the summit of Mont Blanc, 106.
Beke, Charles T., Esq., his views in ethnography, the classification of languages, the progress of civilization, and the natural history of man, 285.
Bibliographica Palæonthologica Animalium Systematica, noticed, 380
Biography, Audubon's Ornithological, 131.
Bischof, Gustav, on the subterranean course of water, and on the absorption of gases by water in the interior of the earth, 246.
Bodies, on the amorphism of solid, 263.

XUM

Botanic Garden, list of rare plants which have flowered in the, 186.
Botto, M. J. D., on the application of electrico-magnetic power to mechanics, 151.
Britain, Great, extent and population of her colonies, 377.
Bronn, Dr, his Lethæa Geognostica, noticed, 282.

Cadell, William, Esq., his answer to Professor T. S. Davies' complaints respecting his paper on the hour-lines of the antique sun-dials, 166.
Chiastolite, 367.
Chrome, crystals of oxide of, 400.
Clelland, Dr, on the probability of human life in Glasgow, 378.
Coprolites, analysis of, 164.

De Candolle, M. Alph., on the history of fossil vegetables, 81.
Death, apparent, which continued for twenty days, 373.
Deposits, on terrestrial or epigeic, on the surface of the Morea, 1.
Diamonds at Algiers, 365.
Dies, on an improved method for making, 317.

Edinburgh New Philosophical Journal, notice to readers, 204
Erratic blocks of the north of Germany, 363.

Fossil tree, analysis of one at present imbedded in the sandstone of Craigleith quarry, 363.
Faroe Islands, on the vegetation and temperature of the, 154.
Felspar, account of artificial, 400.
Fifeshire, analysis of a coprolite from, 165.
Fishes, on a new classification of, and on the geological distribution of fossil species, 176.
Fountains, spouting, 206.
Frogs, introduction of, to Ireland, 372.
Fuchs, Professor, on opal, and the amorphism of solid bodies, 263.

Gases, on the absorption of, in the interior of the earth, 246.
Graham, Dr, his list of rare plants which have flowered in the Royal Botanic Garden, 186.
Grasses, Indian, new genera of, 180.
Gray, Right Hon. Lord, meteorological tables kept by, at Kinfauns Castle, 357.
Gregory, Dr, his analysis of coprolites, 164.

Harlan, Dr, his critical notices of various organic remains hitherto discovered in North America, 28.
Horner, Leonard, Esq., on the quantity of solid matter suspended in the water of the Rhine, 102.
Human species, the three races of the, as connected with different languages, 368.
Hurricanes, observations on the, of the West Indies and the coast of the United States, 20.
Hydroboracite, a new mineral, 367.

Idocrase discovered in the Island of Skye, 367
Infusoria, phosphate of lime in the teeth, and silica in the skin, of, 400.

Jardine, Sir W., his observations on the salmonidæ, 46.
Johnston, James F. W., on the chemical composition of the crystallized oxychloride of antimony, 41.

Lake, on the Pitch, of Trinidad, 331.
Languages, classification of, &c., 285.
Lethæa Geognostica, by Dr Bronn, noticed, 382.
Life, human, on the probability of, in Glasgow, 378.
Light, remarks on the nature of the evidence of a theory of, 275.
Limnoria terebrans and Teredo navalis, on the, as at present existing in certain localities on the coasts of the British Islands, 121.
Lyell, Mr, award of the royal medal for geology and mineralogy to, 364.

Machinery, description of drawing of, for registering the variations of the tide and wind, 311.
Macnab and Co.'s exposition of the principles of Mr James Lang's invention for spinning hemp, &c. noticed, 380.
Man, natural history of, 285.
Mantell, Dr, award of the Wollaston medal to him for his discoveries in geology, 364.
Matter, on the quantity of solid, suspended in the water of the Rhine, 102.
Meteorological observations made at Castle Toward, 355; at Kinfauns Castle, 357; at Edinburgh, 358.
Moon, its influence on the weather, 358.
Museum of Royal College of Surgeons, Ireland, descriptive catalogue of the preparations in the anatomical department of, noticed, 370.

Nees, Prof. Ch. G., his new genera of Indian grasses, 180.
Needle ore, 366.
Nicol, William, his observations on fossil wood from Island of Mull, Egypt, and Southern Africa, 335.

Observations, meteorological, made at Castle Toward, in Argyllshire, 144; Kinfauns, 357; Edinburgh, 358.
Opal, on, 263.
Opium, use of, 374.
Orbigny, M. Alcide d', report of the zoological results of the travels of, in South America, from 1826–1833, 296.
Oyster-shells, chemical composition of, 374.

Pitch Lake of Trinidad, on the, 331.
Platina and gold of the Uralian mountains, 366,

XUM

Powell, Professor, his remarks on the nature of the evidence in support of a theory of light, 275.
Power, on the application of electro-magnetic, to mechanics, 151.

Railway, observations on the Liverpool and Manchester, 322.
Redfield, W. C., his observations on the hurricanes and storms of the West Indies and the coast of the United States, 20.
Remains, organic, hitherto discovered in North America, 28.
Robison, John, Esq. his description and drawings of an improved method of making screw-taps and dies, 317.
Royal Society of Edinburgh, proceedings of, 189, 383.

Salmonidæ, observations upon the, 46.
Saurian bones, on the discovery of, in the magnesian conglomerate near Bristol, 362.
Serres, M. Marcel de, his memoir on the inquiry, whether any terrestrial animals have ceased to exist since man's creation, &c. 59.
Snow blindness, account of, 361.
Stevenson, David, Esq., his observations on the Liverpool and Manchester railway, 322.
Storms, observations on the hurricanes and, of the West Indies, &c. 20.
Strontites, carbonate of, discovered in the United States, 368.

Taps, screw, on an improved method of making, 317.
Teredo navalis and Limnoria terebrans, on the, as at present existing in certain localities on the coasts of the British Isles, 121.
Thompson, William, Esq. on the Teredo navalis and Limnoria terebrans, as at present existing in certain localities on the coasts of the British Islands, 121.
Trevelyan, W. C., on the vegetation and temperature of the Faroe Islands, 154.
Trinidad, on the pitch-lake of, 331.

Uralian Mountains, platina and gold of the, 366.

Vegetable organization, on the rapidity of, 375.
Vegetables, fossil, on the history of, 81.

Walker, Mr R., his analysis of coprolites, 164; of Craigleith fossil tree, 363.
Wardie, analysis of a coprolite from, 164.
Water, remarks on the subterranean course of, 246.
Wells, artesian, 206.
Wernerian Natural History Society, proceedings of, 199, 394.
Wight, Dr Robert, his Prodromus Floræ Peninsulæ Indiæ Orientalis, 158.
Wollaston medal, 364.
Wood, how to make eatable food from, 377.
Woods, fossil, described by William Nicol, 335.
